

BOSCH
Invented for life

Perfectly matched to the architecture

Customized colors available for
Bosch loudspeakers

Sometimes the aesthetics of an installation require more than the regular black or white color options. When it comes to leisure parks, hotels, airports, shopping malls, cruise liners or any other big complexes, you want to blend in with the architecture.

We offer our systems integrators, installers and architects customized color options for the large Bosch loudspeaker portfolio based on the standardized RAL color palette. Suitable for indoor and outdoor applications, the customized speaker painting is durable, unobtrusive and does not interfere with any EN-54 certification compliance.

Customized color service

Get in touch with your sales contact and specify the loudspeaker models, quantities and the desired RAL color code. This service gives you great flexibility to fulfill special tender requirements and comes with a 3-year warranty for the customized painting.

Bosch Security and Safety Systems

- ▶ RAL color options
- ▶ Indoor & outdoor use
- ▶ Durable, unobtrusive loudspeaker painting
- ▶ Maintains EN certification
- ▶ 3-year warranty

Customizing solutions

We also offer support in customizing our standard public address and conference devices. Sometimes specific project needs or tender specifications require individual modifications like extended microphone stems or fitting conference devices to the existing furniture dimensions and colors.
